

biosynthetic nucleobasecontaining modification regulation nucleic cellular

**process** metabolic macromolecule compound

organismal multicellular process population cellular positive cell

**regulation** biological communication

supramolecular assembly proteincontaining biogenesis cytoskeleton

**organization** organelle component cellular chromatin

checkpoint damage stress compound organonitrogen

**response** stimulus signal transduction cellular

organelle location macromolecule vesiclemediated golgi

**localization** transport intracellular establishment

hemopoiesis

structure system embryonic multicellular organ morphogenesis

**development** developmental anatomical

positive activity hydrolase

**function** molecular regulation gtpase catalytic

**homeostasis** chemical cellular

**activation** immune system leukocyte cell process

**death** programmed apoptotic cell regulation

**cycle** cell phase transition regulation mitotic negative process

**adhesion** cellcell leukocyte aggregation

**locomotion** motility regulation migration cell positive

**Similarity**
